A MAKEUP BRUSH CAN MAKE ALL THE DIFFERENCE

Enhance the Customer Application Experience with a Well-Designed Beauty Tool

SUPERIOR FIBER = SUPERIOR APPLICATION

Brush fiber is a critical component of makeup application. As the conduit for your product, the fiber controls how it is picked up and applied, blended or smoothed onto the skin.

Animal Free

Human-engineered, synthetic brush fiber

- Made of thermoplastic polymer
- 100% animal free & cruelty free
- Cruelty-free fibers are made to perform as well as natural hair
- Sterile application
- Tips are engineered to feel soft and not to pull on skin

Tafre

Patented, high-performance fiber designed to mimic animal fiber

- Superior pickup and payoff
- 100% cruelty-free & animal-free
- Dense fiber holds product better
- 28% renewable resin
- Great for powder, cream & liquid
- Consistent shape and memory
- Antimicrobial treatment option prevents bacteria growth

SHAPED FOR PERFECTION

Head shape design can set apart your application experience. Select the right shape to pick up product using the tip of the brush— not the sides—for more precise application.

Many Shapes. Many Application Uses.

DISTINCTIVELY UNIQUE MATERIALS

Complete the experience by creating a piece of art, not just a standard makeup brush. From unique ferrules to decorative designs, build a beauty tool your customers will love.

FUNCTION & CONSTRUCTION

A brush that is properly designed should also be comfortable and work well in the consumer's hand. Work with a partner that will take the time to identify your customers' need, determine the best materials and engineer a brush that enhances your makeup products.
